

SAVANNAH VET CENTER PROPOSAL DRAFT

Offered Property: 2812 Williams Street, Savannah, Georgia 31404

RLP No.: 36C24526R0001

Clean Review PDF

Date: 2026-04-13

Internal Review Use Only. This version is formatted for cleaner PDF printing and markup. Remaining fill-in items, mapped exhibits, measured-plan confirmations, pricing values, and formal submission fields are consolidated near the end so the core proposal narrative reads cleanly.

1. Executive Summary

2812 Williams Street is a strong best-value candidate for the Savannah Vet Center requirement because it combines:

- existing-building compliance
- single-story functionality
- contiguous-suite potential within the RLP size band
- strong parking support
- adaptable existing improvements
- local delivery and property-management capability

The offered property is an existing free-standing one-story commercial building in Savannah, Georgia. Current planning supports a contiguous suite of approximately **4,835 ABOA SF** and approximately **5,160 RSF**, subject to final measured confirmation. This remains within the Government's required size parameters and below the stated RSF cap.

The property also presents a materially stronger parking story than a bare owner assertion. Current site-plan review indicates approximately **41 surface parking spaces**, including accessible spaces, supporting the ability to reserve the required **30 exclusive surface parking spaces** for Government use, subject to final striping, accessibility, and layout confirmation.

From a delivery standpoint, the property offers a practical one-story shell with existing office/support functionality, multiple restrooms, service/loading capability, and an existing operational generator. These features reduce adaptation friction and support a credible path to delivery.

From an execution standpoint, the project benefits from local leasing, management, and coordination capability. That local accountability is a real advantage in a federal lease delivery environment where responsiveness and field execution discipline matter.

2. Offered Property

Offered Property: 2812 Williams Street
Savannah, Georgia 31404

Core assembled facts

- Existing free-standing one-story commercial building
- Approximately **6,542 SF** building area
- Approximately **1.04 acres** site area
- Masonry / brick construction
- Adaptable open and enclosed interior areas
- Reception / administrative orientation
- Private office potential
- Multiple restrooms
- Rear service/loading functionality
- Existing operational generator
- Parking field capable of supporting the Government's parking requirement

Current planning assumptions

- Target suite size: approximately **4,835 ABOA SF**
- Target rentable area: approximately **5,160 RSF**
- 30+ exclusive Government parking spaces supportable
- Fully serviced gross lease structure
- Tenant improvements recovered through lease economics

3. Qualification and Compliance Narrative

2812 Williams Street satisfies the RLP's central threshold requirement for space in an **existing building** and provides a realistic path to delivering the Government's required premises as a **contiguous block of space** within the Government's stated size constraints.

The overall building size appears sufficient to support a demised suite within the required **4,172 ABOA SF minimum to 5,042 ABOA SF maximum**, subject to final measured test fit and rentable-area confirmation. Current planning centers on approximately **4,835 ABOA SF**, which remains comfortably within the stated range.

The property also provides a major operational advantage in parking. Current site-plan review indicates approximately **41 surface parking spaces**, including accessible spaces, materially supporting the ability to reserve **30 exclusive Government spaces** with cushion, subject to final striping, accessibility, and layout confirmation.

Because the property is free-standing, one-story, and controlled as a single site, it supports a cleaner operational posture than many multi-tenant alternatives. The Government is not being forced into a fragmented building condition with unnecessary circulation, access-management, or control complexity.

4. Site, Surrounding Uses, and Transit

The subject property is situated in an established Savannah commercial setting with practical access to major routes and neighborhood-serving amenities. Its location supports employee and visitor convenience while preserving the independent building identity and site control expected of a Government-serving facility.

Surrounding uses

Current surrounding-use diligence indicates that the area around 2812 Williams Street is generally compatible with the proposed use. Current review identified **one small liquor store within approximately 1,000 feet** of the property and did **not identify other objectionable nearby uses** in the same review sweep. This should be treated as a **targeted final compliance item**, rather than a broad surrounding-area concern, and should be evaluated against the solicitation's specific prohibited-use standard and measurement methodology.

Transit

Based on current diligence, transit service appears likely supportable for 2812 Williams Street, subject to final exhibit-grade confirmation. The final transit exhibit should identify the applicable route(s), stop location(s), and pedestrian connection necessary to demonstrate compliance with the RLP's transit-access requirement.

Area of consideration

Current location diligence indicates that 2812 Williams Street appears to satisfy the RLP's Savannah area-of-consideration requirement. The final exhibit should present the property in relation to the solicitation's stated boundary description and supporting map context.

5. Building Functional Suitability

For this requirement, the one-story design of 2812 Williams Street is a major strength. Single-story occupancy supports efficient accessibility planning, simpler circulation, reduced wayfinding friction, and a more practical daily experience for staff and visitors.

The building's current configuration appears to provide a favorable adaptation platform with:

- reception / intake orientation
- administrative and support areas
- flexible open areas for reconfiguration
- private office potential
- multiple restrooms
- support/service functionality

These conditions reduce avoidable retrofit burden. The building is not being presented as already complete for Vet Center occupancy; it is being presented accurately as an efficient existing shell with meaningful infrastructure and layout advantages that support a lower-friction path to final delivery.

6. Delivery and Management Story

PIER Commercial Real Estate and PIER Commercial Real Estate Management, LLC will deliver this project through a locally managed execution framework emphasizing speed, accountability, and disciplined coordination.

Proposed delivery sequence

1. Confirm final premises limits and measured test fit
2. Complete code, accessibility, and fire/life-safety review
3. Refine final scope and design package
4. Price and implement required tenant improvements and security measures
5. Coordinate permits, vendors, and construction execution
6. Obtain required occupancy approvals and coordinate Government acceptance

Management advantage

A local team with direct authority and day-to-day accountability is materially better positioned to manage real-world project issues than a remote ownership structure. That local execution capability is part of the property's best-value proposition.

7. Price Volume Position

Pricing structure

The offer will be structured as a **fully serviced gross lease** that includes:

- shell value
- operating costs
- amortized tenant improvements
- any properly supportable building-specific capital
- parking included in rental consideration

Current live pricing posture

The recommended live scenario remains the **Base Case**.

Current placeholder-band approach

Shell

- competitive: lean but believable
- base: balanced
- defensive: protected

Tenant Improvements (TI)

- competitive: disciplined middle-low
- base: realistic middle for a federal counseling / administrative fit-out
- defensive: middle-high with stronger code, accessibility, security, acoustic, and MEP burden

Operating burden

- competitive: responsible but tighter
- base: slightly conservative
- defensive: conservative

Contingency

- competitive: lean
- base: practical
- defensive: stronger reserve

BSAC

- competitive: minimal
- base: minimal / selective if clearly justified

- defensive: selective use only if clearly supportable

Pricing status

The pricing narrative is package-ready, but still requires placeholder numeric bands and later live worksheet values.

8. Exhibits Planned for Final Package

The final proposal package should include, at minimum:

- Area-of-Consideration Exhibit
- Site and Parking Exhibit
- Measured Test Fit / Space Plan
- Transit Proximity Exhibit
- Surrounding-Use Compatibility Exhibit
- Accessibility / ABAAS review summary
- Fire / Life Safety review summary
- Security Level II scope summary
- Qualifications / management support materials

Parking exhibit caption

Current site-plan review indicates approximately **41 surface parking spaces**, including accessible spaces, supporting the Property's ability to reserve **30 exclusive surface parking spaces** for Government use, subject to final striping, accessibility, and layout confirmation.

Surrounding-use exhibit caption

Current nearby-use diligence identified **one small liquor store within approximately 1,000 feet** of the property and did **not identify other objectionable nearby uses** in the same review sweep. This item should be evaluated against the RLP's exact prohibited-use language, distance measurement method, and agency interpretation.

Transit exhibit caption

The Property appears to benefit from active local transit service in the broader market area. Final exhibit support should identify the relevant route(s), stop location(s), and walk path needed to demonstrate compliance with the solicitation's transit-access standard.

Test-fit exhibit caption

The offered premises are planned as a contiguous suite of approximately **4,835 ABOA SF** and approximately **5,160 RSF**, subject to final measured confirmation.

9. Bottom-Line Position

This package now supports a clear and credible submission story:

- the property is an existing-building solution
- the suite can be planned within the required size range
- parking appears materially supportable with cushion
- the location story is workable
- the nearby-use issue is narrowed to one specific item, not a broad area failure
- the pricing posture is disciplined and best-value-oriented
- local execution strength remains a real differentiator

The remaining work is primarily evidentiary, numeric, and formal — not conceptual.

10. Remaining Fill-In and Confirmation Items

Measured plan / space planning

- final measured **ABOA** confirmation
- final measured **RSF** confirmation
- final test-fit confirmation of contiguity

Parking

- final parking exhibit graphic
- final accessible-space count/layout confirmation
- final striping/layout confirmation
- confirmation of any loading/fire-lane constraints affecting count

Transit

- final route identification
- final stop identification
- final compliant walk-path confirmation
- final transit exhibit graphic

Prohibited uses / surrounding uses

- final map exhibit centered on subject property
- exact RLP prohibited-use standard checked against mapped condition
- final treatment of the identified small liquor store

Area of consideration

- final map exhibit
- boundary-description cross-check

Compliance reviews

- accessibility / ABAAS summary
- fire / life-safety summary
- Security Level II scope summary

Price volume

- placeholder numeric shell bands
- placeholder numeric TI bands
- placeholder numeric operating-cost bands
- placeholder contingency bands

- placeholder BSAC treatment
- selected live scenario output
- alignment to federal pricing forms

Forms / packaging

- GSA Form 1364 entries
- TICS / security schedule entries
- required certifications / statements
- signature blocks
- date blocks
- contact blocks
- final email/submission assembly order

11. Review Instruction

For printed or PDF review, focus on:

1. whether the submission story feels credible and complete
2. whether any section overclaims beyond current support
3. whether any important factual advantage is still understated
4. whether the remaining blanks are truly fill-ins, not hidden strategy gaps
